Date & Time: Wednesday, 20 March 2019, 16:00 - 17:00
Venue: Room 1406, building 1, MUIC

When I was a college student, I was innocent enough to think that all the math problems have been solved. Little that I know, a simple looking game like Chomp is already very complicated! Chomp is a two-player game where player takes turn to take a bite of the corner of the m -by- n chocolate bar, the player who eats the last (poisoned) square at the corner loses the game. We will do some analysis of this game by mean of computer and algorithm.
